2 WAYS TO LEVERAGE AI TODAY...

VS

BUILD

BUY

■ Build Your Own AI - Considerations

BUILD

- Determine Use-Case(s)
- Prepare Infrastructure
- Collect/Curate Data Sources
- Train from Scratch vs. Pre-trained Model
- Train and Validate the Model
- Secure the Environment
- Maintain and Approve

BUILD IF:

You need proprietary models
You have data scale + talent

BUY

- Determine Use-Case(s)
- Purchase Licenses
- Secure the Environment
- Validate the Model

BUY IF:

You're after productivity / workflow
optimization or only require general
use cases (for now)

KEY CONSIDERATIONS

If you're leveraging AI, here are the Top 5 things you'll need:

1. GOOD DATA
2. CORRECT PERMISSIONS
3. ACCESS REVIEWS
4. NHI IDENTITY TRACKING
5. EMPLOYEE TRAINING

AI BOT BATTLE!

YOU CAN EITHER COME WITH ME AND LIVE
UP TO YOUR ULTIMATE POTENTIAL, OR LIE
HERE AND FACE THE CONSEQUENCES

■ Security and Privacy in AI Models

Here's the model for this webinar:

- **Objective:** determine if using <AI Platform> is right for your regulated organization
 - **Question 1:** Is it safe to use this Vendor/Product if I'm a highly regulated organization?
 - **Question 2:** Can I trust Vendor/Product to keep my data safe and private?
 - **Question 3:** Why would I choose to use this Vendor/Product?
- **NOTE:** this documentation changes regularly – so this is a point-in-time exercise from 2026 – if you are viewing this later, please use this section as a framework to analyze these statements, as they may have changed

A man and a woman are standing in a dimly lit office. The man, on the left, is wearing a dark polo shirt with thin white horizontal stripes. The woman, on the right, is wearing a red vest over a grey patterned shirt. They both have serious, concerned expressions. In the background, a large poster is visible with a circular seal at the top and a list of items with checkboxes. The text on the poster includes: "Rigid Envelope", "Lopsided or Uneven Envelope", "Protruding Corners or Tinfoil", "Vis...", "F... and Special Delivery", "R... such as Confidential,", "P...", "Handwritten Addresses", and "... such as Masking Tape,". To the right, a water cooler is partially visible. The overall atmosphere is tense and mysterious.

You underestimate how the smallest
decisions can compound to significant
differences over a lifetime...

The Bot Battle Lineup

1

Microsoft
Copilot

2

OpenAI
ChatGPT

3

Google
Gemini

4

Anthropic
Claude

5

Perplexity

6

DeepSeek

■ Prompt Suggestion

- Here's the prompt we're using for this section:
- Please review all available privacy and security documentation from <VENDOR> regarding <AI MODEL> and provide a high-level summary. I'm trying to answer two questions: 1) "Is it safe to use <AI MODEL> if I'm working at a highly regulated organization?" and 2) "Can I trust <AI MODEL> and <VENDOR> to keep my data safe and private?"
- Mileage may vary depending on which GenAI tool you use.
- Tweak as you see fit.

KEY MESSAGE!

■ MICROSOFT COPILOT

- Copilot is the natural first-step for most organizations (especially if using M365)
- **Question:** Is it safe to use Microsoft Copilot if I'm a highly regulated organization?
- **Question:** Can I trust Microsoft Copilot to keep my data safe and private?
- **Question:** Why would I choose to use this Copilot?

Copilot

Your everyday AI companion

Category	Copilot Chat	Copilot Business (SMB)	Microsoft 365 Copilot (Enterprise add-on)	Copilot Studio
What it is	Free, secure AI chat for work. Great for web-grounded answers and quick tasks.	Full-featured AI assistant for small/midsize businesses (≤300 users) embedded in Word, Excel, Outlook, Teams, PowerPoint.	Premium AI assistant for enterprise —adds Copilot across Microsoft 365 apps with work-data grounding.	Low-code platform to build custom AI agents and automate processes; billed with Copilot Credits (PAYG or prepaid).
Best for	Everyday help: writing, summarising, web research, light analysis on uploaded files.	Teams that want powerful AI inside their apps at SMB pricing.	Organisations needing deep integration with work data (emails, files, meetings) and advanced agents.	Creating custom agents (e.g., department assistants) that connect to tools, data, and workflows.
Where you use it	Web (m365copilot.com), Teams, Outlook, Edge, Windows app.	Directly in Microsoft 365 apps: Word, Excel, PowerPoint, Outlook, Teams, plus the Copilot app (Chat, Pages, Search, Agents).	Same in-app experiences across Microsoft 365, plus Copilot Chat, Pages, Search, Notebooks, Agents.	In Copilot Studio (web), publishing to channels (e.g., SharePoint, Teams, web) and integrating via connectors.
Data it uses (“grounding”)	Web data . Can use uploaded files you provide in chat; doesn’t browse your tenant by default.	Your work data (Microsoft Graph: emails, files, chats, calendars) with your permissions.	Your work data across Microsoft 365 + partner data via Graph connectors; personalisation with Work IQ.	Whatever you connect: internal/external sources, plugins, tools; consumption metered as Copilot Credits .
Security & privacy	Enterprise Data Protection ; admin controls for safe business use.	Same enterprise protection; respects tenant permissions and policies.	Same, plus admin governance (Copilot Control System, Purview, agent management).	Operates within Power Platform/M365 governance; licensing & usage tracked via Copilot Credits .
Agents	Basic web-grounded agents; work-grounded agents available metered via PAYG.	Included agents (Researcher, Analyst, etc.) for SMB scenarios inside apps and chat.	Full agent set (create, discover, deep reasoning like Researcher/Analyst) grounded in work data.	Build custom agents ; design conversations, connect tools, publish and operate; pay by Copilot Credits .
Cost	Included with eligible Microsoft 365 subscriptions.	USD \$21/user/month (SMB pricing).	USD \$30/user/month add-on for enterprise (requires qualifying base plan).	PAYG via Azure or prepaid packs ; price based on Copilot Credits consumption.
License prerequisites	Available to commercial customers with eligible Microsoft 365 subscriptions (no extra license).	Requires Microsoft 365 Business plan; limited to ≤300 seats.	Requires a qualifying Microsoft 365 or Office 365 plan (E3/E5/F-series, Business plans, Apps).	Needs a Copilot Studio user license and a tenant Copilot Credits subscription (or PAYG).
Typical limitations	Web-only grounding unless you upload files; lighter capabilities vs paid Copilot in apps.	Seat cap (≤300); feature breadth targeted for SMB simplicity and price.	Additional cost per user; depends on data readiness and governance.	Variable spend (credits); requires design/ops skills to build and manage agents.

■ Is Copilot Safe? Can I Trust Microsoft?

- **Yes—when deployed via Microsoft 365 with enterprise configurations.**
-  **Safety: Compliance & Security**
 - Meets GDPR, EU Data Boundary, ISO/IEC 27001/27018, SOC 2; supports SEC, FINRA, CFTC requirements. Encryption at rest (FIPS 140-2) and in transit;
 - Zero Trust architecture with MFA and least privilege. Auth handled via Entra ID—permissions inherited by policy or Conditional Access.
-  **Trust: Privacy & Data Handling**
 - Prompts, responses, and Graph data are NOT used to train foundation models. Microsoft acts as data processor under the DPA.
 - Audit logs and eDiscovery available via Microsoft Purview.
-  **Key Risk: Oversharing and Over-Permissioning**
 - Copilot surfaces anything the user can access—research shows ~16% of business-critical data is overshared on average. Copilot outputs don't always inherit sensitivity labels from source files. Audit permissions before deploying.

USE COPILOT IF YOU...

- Are a Microsoft 365 shop and want to harness the power of GenAI, Agents, and now Copilot
- Want to keep your data with one ecosystem
- Value business-oriented guardrails
- Note: Copilot uses ChatGPT and Claude models under the hood—you can choose

■ OPENAI CHATGPT

- ChatGPT is the most popular AI Platform in the world today
- **Question:** Is it safe to use ChatGPT if I'm a highly regulated organization?
- **Question:** Can I trust ChatGPT to keep my data safe and private?
- **Question:** Why would I choose to use this ChatGPT?

Business

A secure, collaborative workspace for startups and growing businesses

Annual billing Monthly billing

\$25 / user / month
billed annually

- ✓ **Boost your productivity.** Automate repetitive tasks and accelerate drafting.
- ✓ **Power breakthroughs.** Collaborate and launch novel features with rapid prototyping.
- ✓ **Decide with clarity.** Gain actionable insights using natural language.
- ✓ **Tailor every conversation.** Get personalized and intelligent support across all touchpoints to secure customer loyalty.
- ✓ **Leverage Intelligent automation.** Reduce labor demands, minimize errors, and optimize efficiency.
- ✓ **Ship faster and better.** Gain a clear edge by accelerating time-to-market and building high-quality, unique AI capabilities.

Unlimited subject to abuse guardrails. [Learn more](#)

Enterprise

Enterprise-grade AI, security, and support at scale

- ✓ **Everything in Business, plus:**
- ✓ **Work with confidence.** Secure your data with enterprise-grade security.
- ✓ **Advanced data controls.** Fine-tune, redact, encrypt, and delete data. [Learn more](#)
- ✓ **24/7 priority support.** Get direct access to AI advisors (eligible customers)
- ✓ **Invoicing and billing, volume discounts**

■ Is ChatGPT Safe? Can I Trust OpenAI?

- **Yes—with the right deployment model (GPT-5.5 via ChatGPT Enterprise, Business, or API).**
-  **Safety: Compliance & Security**
 - AES-256 at rest, TLS 1.2+ in transit. SOC 2 Type 2, ISO/IEC 27001/27017/27018/27701. HIPAA BAAs available.
 - Data residency options for sovereignty requirements. No training on business data by default.
-  **Trust: Privacy & Data Handling**
 - You own your data. Custom retention policies; deleted data purged within 30 days. Zero Data Retention (ZDR) available for eligible API endpoints.
 - Red-teaming conducted with Microsoft and UK AI Safety Institute.
-  **Consumer versions (Free/Plus) are NOT recommended**
 - Data retention and training policies on free tiers are not suitable for regulated environments.

BUT CAN YOU TRUST SAM ALTMAN?

"People have a very high degree of trust in ChatGPT, which is interesting because AI hallucinates. It should be the tech that you don't trust that much."

USE CHATGPT IF YOU...

- Don't use Copilot and want access to the most up-to-date, capable frontier models (GPT-5.5 rates out similar to Mythos)
- Are building custom GPTs, agentic workflows, or integrating via API into your own custom models
- Value a strong developer community and integration options

■ GOOGLE GEMINI

- Google is also going all-in on AI, integrating Gemini into phones, home IoT devices, Workspace, and more...
- **Question:** Is it safe to use Gemini if I'm a highly regulated organization?
- **Question:** Can I trust Gemini to keep my data safe and private?
- **Question:** Why would I choose to use this Gemini?

Starter

Start a trial

All of Standard, and:

- 5 TB
or upgrade for more*
- Secure custom business email + S/MIME encryption
- Video meetings with in-domain live streaming, 1000 participants
- Data loss prevention (DLP)
- Context-aware access
- Enterprise data regions
- Cloud Identity Premium
- Enterprise endpoint management
- AI Classification for Google Drive
- Assured Controls & AI Classification available add-on
- Enhanced Support for faster response times for critical issues

Enterprise

Let's talk

Contact sales

All features mentioned, and:

- 5 TB
or upgrade for more*
- Secure custom business email + S/MIME encryption
- Video meetings with in-domain live streaming, 1000 participants
- Data loss prevention (DLP)
- Context-aware access
- Enterprise data regions
- Cloud Identity Premium
- Enterprise endpoint management
- AI Classification for Google Drive
- Assured Controls & AI Classification available add-on
- Enhanced Support for faster response times for critical issues

■ Is Gemini Safe? Can I Trust Google?

- **Yes—if deployed via Google Cloud or Workspace with enterprise controls.**
-  **Safety: Compliance & Security**
 - TLS in transit, AES-256 at rest. IAM with SSO and 2-step verification. VPC Service Controls and Client-Side Encryption.
 - Certifications: GDPR, HIPAA, FedRAMP High, SOC 1/2/3, ISO 27001/27017/27018/27701, and ISO 42001 (the world's first AI Management Systems standard).
-  **Trust: Privacy & Data Handling**
 - No training on customer data by default. Granular admin controls for access, retention, and export. Audit Logs and Vault integration for eDiscovery.
 - Gemini 2.5 trained to resist indirect prompt injection attacks.
-  **Consumer Gemini apps are NOT recommended for regulated environments**

USE GEMINI IF YOU...

- Are a Google Workspace organization? Then Gemini is your natural first step
- Look for the strongest compliance certification set (incl. ISO 42001) and want granular admin controls across your entire org
- Value FedRAMP High compliance (ready for government-regulated environments)
- Otherwise: avoid for institutional use—consumer versions are not suitable for regulated environments

■ ANTHROPIC CLAUDE

- Claude seems to be all over these days, and is growing in adoption quickly.
- **Question:** Is it safe to use Claude if I'm a highly regulated organization?
- **Question:** Can I trust Claude to keep my data safe and private?
- **Question:** Why would I choose to use this Claude?

Free

Try Claude

\$0

Free for everyone

Try Claude

- ✓ Chat on web, iOS, Android, and your desktop
- ✓ Generate code and visualize results
- ✓ Write, edit, and create documents
- ✓ Analyze text and images
- ✓ Ability to search the web
- ✓ Memory across conversations
- ✓ Create files and execute code
- ✓ Unlock more from Claude with desktop extensions
- ✓ Connect Slack and Google Workspace services
- ✓ Integrate any context connectors with remote data
- ✓ Extended thinking for complex tasks

Team

For teams of 5 to 150

Get Team plan

Standard seat

\$20

All Claude features, plus more usage than Pro*

Per seat / month if billed annually. \$25 if billed monthly

Premium seat

5x more usage than standard seats*

Per seat / month if billed annually. \$125 if billed monthly

- ✓ Includes Claude Code and Claude Desktop
- ✓ Connect Microsoft 365, Slack, and Google Workspace
- ✓ Enterprise search across your organization
- ✓ Central billing and administration
- ✓ Single sign-on (SSO)
- ✓ Domain verification
- ✓ Admin controls for remote and local connectors
- ✓ Enterprise deployment for the Claude desktop app
- ✓ No model training on your content by default
- ✓ Mix and match seat types

Enterprise

For large businesses operating at scale

Get Enterprise plan

Seat price + usage at API rates

\$20/seat. Usage cost scales with model and task.

Enterprise plan features, plus:

- ✓ Set user and org spend limits
- ✓ Docs cataloging
- ✓ Fine-grained access with fine-grained permissions
- ✓ Support for Cross-domain Identity Management (SCIM)
- ✓ Domain capture
- ✓ Audit logs
- ✓ Compliance API for observability and monitoring
- ✓ Custom data retention controls
- ✓ Network-level access control
- ✓ IP allowlisting
- ✓ HIPAA-ready offering available

■ Is Claude Safe? Can I Trust Anthropic?

- **Yes—if deployed with enterprise-grade licensing (Team or Enterprise).**
-  **Safety: Compliance & Security**
 - SOC 2 Type II, ISO 27001:2022, and ISO 42001:2023 certified. CRaiG compliance automation tool. 28 enterprise security integrations (May 2026) spanning DLP, SASE, SIEM, identity management, and eDiscovery.
 - ZDR mode available. Available via Anthropic API, Claude Enterprise, AWS Bedrock, and Google Vertex AI. Permission-based architecture in Claude Code.
-  **Trust: Privacy & Data Handling**
 - Client data is NEVER used for training. Strongest default privacy posture of any platform reviewed. Granular retention controls; memory features are opt-in. Prompt injection defenses with input sanitization and command blocklists.
-  **NOTE: multiple CVEs exist around Claude. Cowork activity is not captured in Audit logs.**

USE CLAUDE IF YOU...

- Are processing large documents (hundreds of pages)—Claude's extended context window is best-in-class
- Want the strongest privacy protections and most responsible AI—no training on your data, ever
- Are looking to leverage Claude Code as your dev team
- Want every output source-attributed for regulatory traceability

■ PERPLEXITY

- Perplexity is best known for its research and citation capabilities...
- **Question:** Is it safe to use Perplexity if I'm a highly regulated organization?
- **Question:** Can I trust Perplexity to keep my data safe and private?
- **Question:** Why would I choose to use Perplexity?

Certified security

SOC 2 Type II

SOC 2 Type II

SOC 2 Type II

■ Is Perplexity Safe? Can I Trust It?

- **Probably... with Enterprise tiers, but caution is advised.**
-  **Safety: Compliance & Security**
 - SOC 2 Type II certified (2026). SSO with MFA and JIT (just-in-time) access controls. Zero Data Retention for API—no prompts or responses stored or used for training.
 - Enterprise Pro for Finance includes cited answers from SEC filings, earnings calls, and proprietary databases. CrowdStrike partnership for enhanced threat detection.
-  **Trust: Privacy & Data Handling**
 - Enterprise data not used for training. Uploaded files deleted after 7 days. Incognito Mode can be enforced org-wide.
-  **Notable Risk: April 2026 class-action lawsuit**
 - An April 2026 CA lawsuit alleges Perplexity embedded tracking software sharing user conversations with Meta and Google. Monitor this closely before deploying for institutional use.
 - No ISO 27001 or ISO 42001 certification.
 - **Consumer Perplexity tiers are NOT recommended for regulated environments**

USE PERPLEXITY IF YOU...

- Want best-in-class cited research capabilities tied to live financial databases
- Value best-in-class Deep Research capabilities
- Want real-time regulatory and market intelligence monitoring
- NOTE: probably best as a “build” model vs. an enterprise model at current

■ DEEP SEEK

- DeepSeek is known for being lower-cost and one of the first models to include deep reasoning...
- **Question:** Is it safe to use DeepSeek if I'm a highly regulated organization?
- **Question:** Can I trust DeepSeek to keep my data safe and private?
- **Question:** Why would I choose to use DeepSeek?

deepseek

Access type	Pricing	Details
Local model use		Download and run models locally (e.g., via LM Studio, Ollama, Cerebras). Only viable option for regulated use — and only if robust security controls layered on top.
Model license	Free / Open weight	Permissive licenses (e.g., MIT, Apache 2.0) allow research and commercial use. Note: Permissive license governs only — it does not address data privacy or national security obligations.
Web chat	Free	Chat free with unlimited access — no daily request or pay cap. Credit card required. All data processed in China under PRC jurisdiction.
API access	\$0.14 / M input tokens	Billed by output tokens. V4 Flash from \$0.14/M input to \$1.74/M input tokens. 5M free tokens for new accounts. Cheapest API of any major model — by a significant margin.

■ Is it safe to use DeepSeek?

■ Is it safe to use DeepSeek?

NOT RECOMMENDED for direct use in regulated environments without significant safeguards. While DeepSeek offers powerful open-source models and cost-effective performance, its **privacy, legal, and infrastructure risks** make it unsuitable for sensitive financial data unless self-hosted with strict controls.

⚠ Key Risks for Businesses

- **No enterprise-grade version available:** DeepSeek does not currently offer a dedicated enterprise deployment with contractual guarantees or indemnification.
- **Data retention concerns:** DeepSeek's online platform may retain user data indefinitely, even after account deletion.
- **Servers located in China:** All data is stored under Chinese jurisdiction, raising concerns about compliance with U.S., EU, and other international data protection laws.
- **No indemnification:** Users bear full legal risk for outputs, including potential IP infringement.
- **Censorship and bias:** DeepSeek suppresses politically sensitive topics due to Chinese regulatory influence.
- **Zero guardrails:** Cisco research found a 100% attack success rate against DeepSeek R1 using the HarmBench dataset—no safety filters held up.

✓ Safer Use Case

- **Self-hosted deployments:** Running DeepSeek locally (offline) avoids cloud-based data sharing and offers more control.
- **Open-source flexibility:** Developers can inspect and modify the model but must implement their own security and compliance layers.

■ Can I trust DeepSeek and Hangzhou?

Not without significant reservations. DeepSeek's privacy policy and operational practices raise multiple red flags for enterprise trust.

Privacy Policy Highlights

- **Broad data collection:** Includes prompts, chat history, device info, and location.
- **Data used for model improvement:** Inputs and outputs may be reused to improve services unless explicitly opted out.
- **Third-party sharing:** Data may be shared with analytics, advertising partners, and law enforcement.
- **Keystroke tracking:** Privacy policy references monitoring user keystrokes, raising concerns about behavioral profiling.

Security Concerns

- **No clear encryption standards:** No mention of AES-256 or TLS in documentation.
- **Weak or absent guardrails:** Cisco found a 100% attack success rate against DeepSeek R1 using HarmBench—no safety filters held.
- **Hidden code sending data to China Mobile:** Security researchers found code linking the app to China Mobile—a state-owned telecom banned from operating in the U.S.

Regulatory and Legal Risks

- **Subject to PRC law:** Disputes must be litigated in China, with limited recourse for foreign entities.
- **Banned by multiple governments:** NASA, U.S. Navy, Taiwan, Italy, Australia, South Korea, India, Czech Republic, Netherlands, and many U.S. states and agencies have banned DeepSeek.

USE DEEPSEEK IF YOU...

- Are selling data and corporate secrets to China
- Want the People's Republic of China (PRC) to live in your home or corporate network, steal your data, and siphon your intellectual property...

The less sense it makes, the better...

You may have already heard of OpenClaw – the FREE, LOCALLY HOSTED AI agent that connects LLMs to real software. It reads/writes files, runs shell commands, browses the web, sends emails, and controls APIs. Launched January 2026, it was available for free in 48 hours. Creator Peter Steinberger joined OpenAI in February 2026; a new foundation now backs the project. Super cool – but NOT ready for corporate prime-time for a variety of reasons. But things are changing fast...

Feature	OpenClaw
Executes commands	Yes — local system
Access to files	Yes — local filesystem
Runs workflows	✓ Yes — across local apps
Multi-step reasoning	✓ Built-in
Works across apps	× Mostly no

When you really put everything on a bagel... It becomes this: the truth.

What is the truth? Nothing matters.

If nothing matters, then all the pain and guilt you feel for making nothing of your life goes away.

AI BOT BATTLE CONCLUSION

WHAT DOES SBS RECOMMEND?

Depends a bit on your use-case... and the Build vs. Buy concept
BUT – if you are just exploring AI productivity and efficiency gains for employees... AND you want to use customer information, consider the following

- **MICROSOFT COPILOT** is the natural first step – you're already in it
- **ChatGPT** is the most popular for a reason, and **Claude**'s use cases are becoming hard to ignore, but your data is leaving your environment...
- If you are a Google shop, **Gemini** would be your natural first step... otherwise avoid for institutional use
- **Perplexity** isn't used that often in regulated environments – not a strong enough use case.
- **DON'T TOUCH DEEPSEEK, PLEASE...**

■ BIG TAKEAWAYS

- **YES – YOU CAN USE AI FOR BUSINESS** (*even if you are regulated*)
 - However, you need to be able to justify your use-cases and provide the typical governance documentation expected by regulators...
 - Do your homework (AI can help with that!)
- Consider the Build vs. Buy scenarios
- Don't use free AI models for work-related tasks
- **Premium/Enterprise versions of AI platforms are generally safe to use...** depending on your organizational use cases
- **PLEASE NEVER USE DEEPSEEK!**

Just be a rock.
