

First off...

... you do the math...

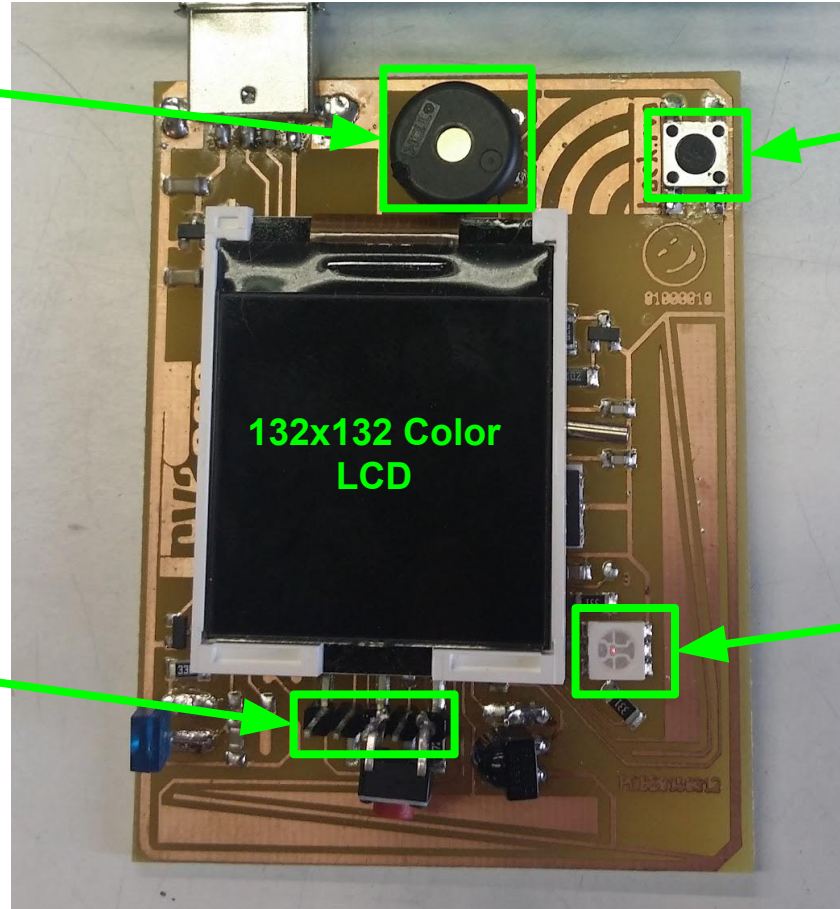

Piezo Buzzer

Push Button

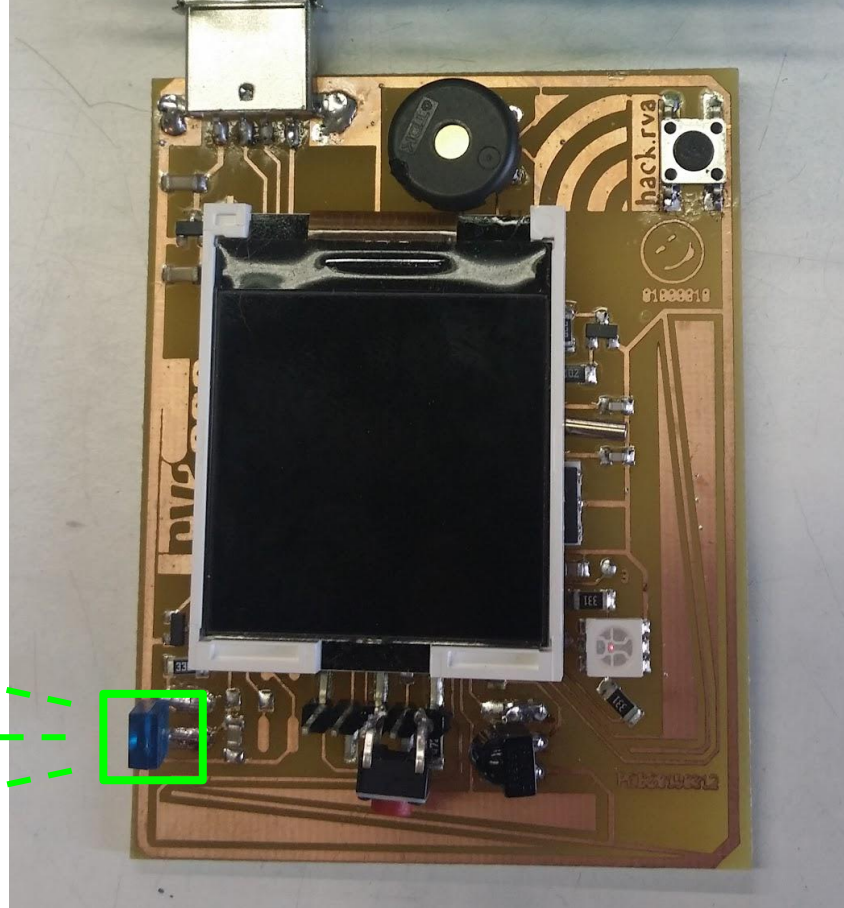

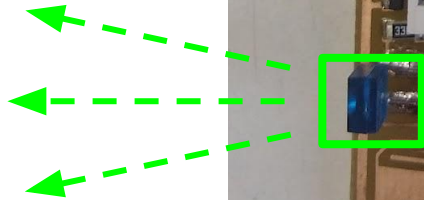

**132x132 Color
LCD**

**Programming
Header**

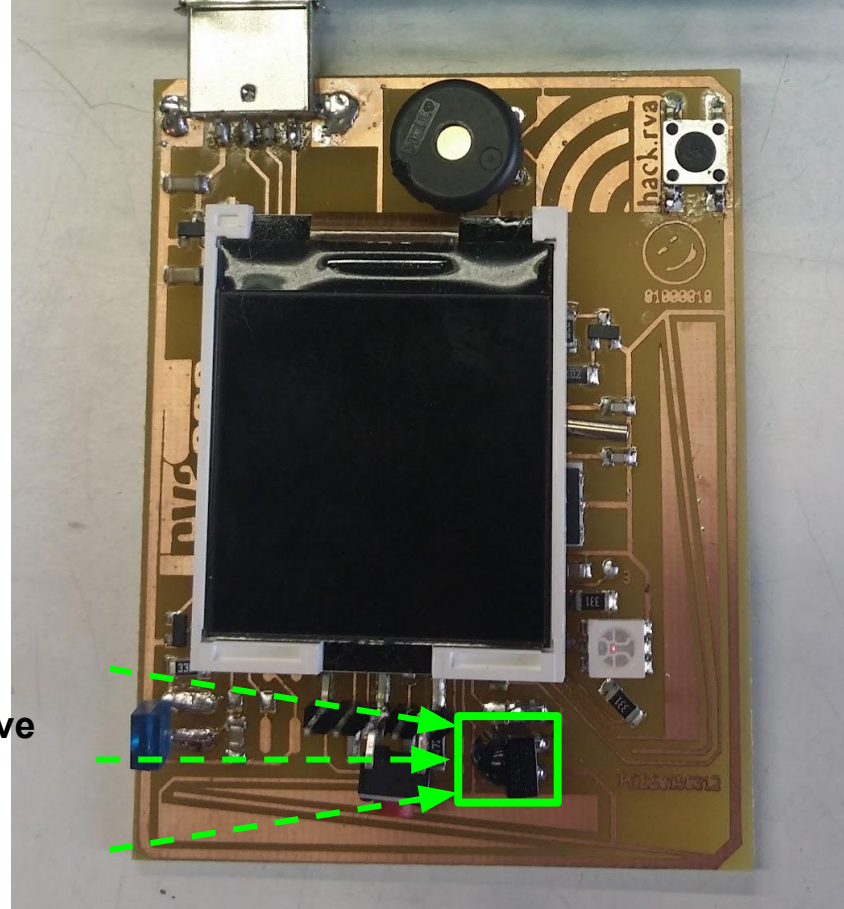

RGB LED

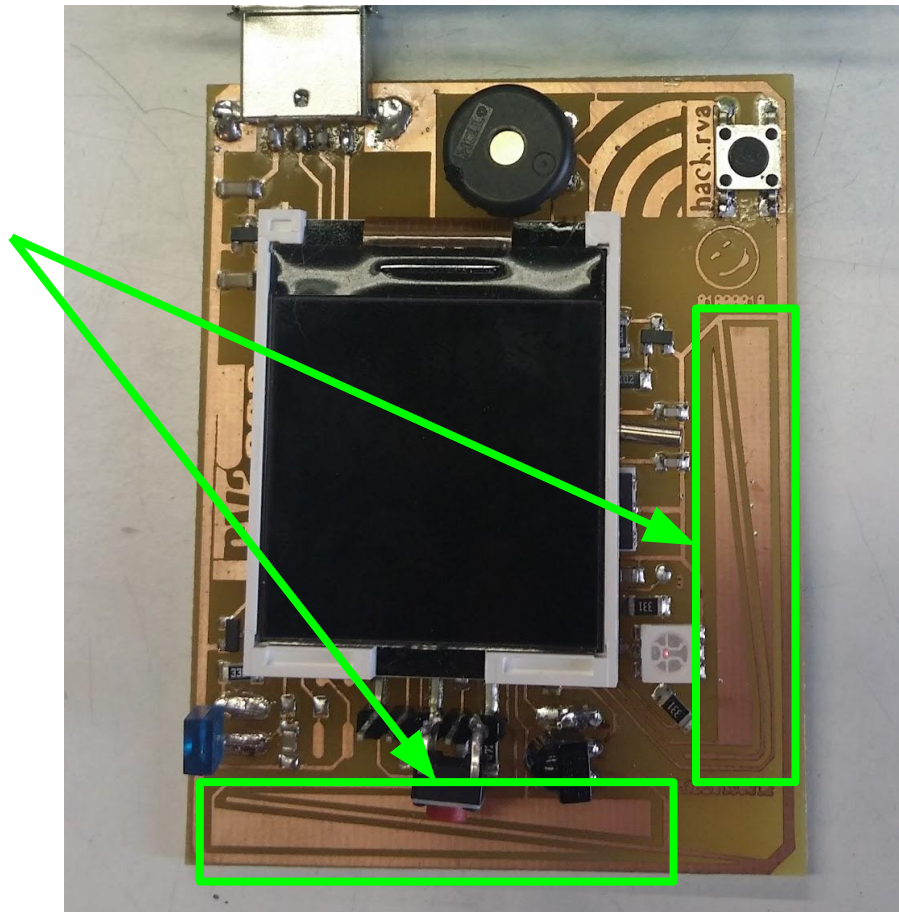

IR Transmit

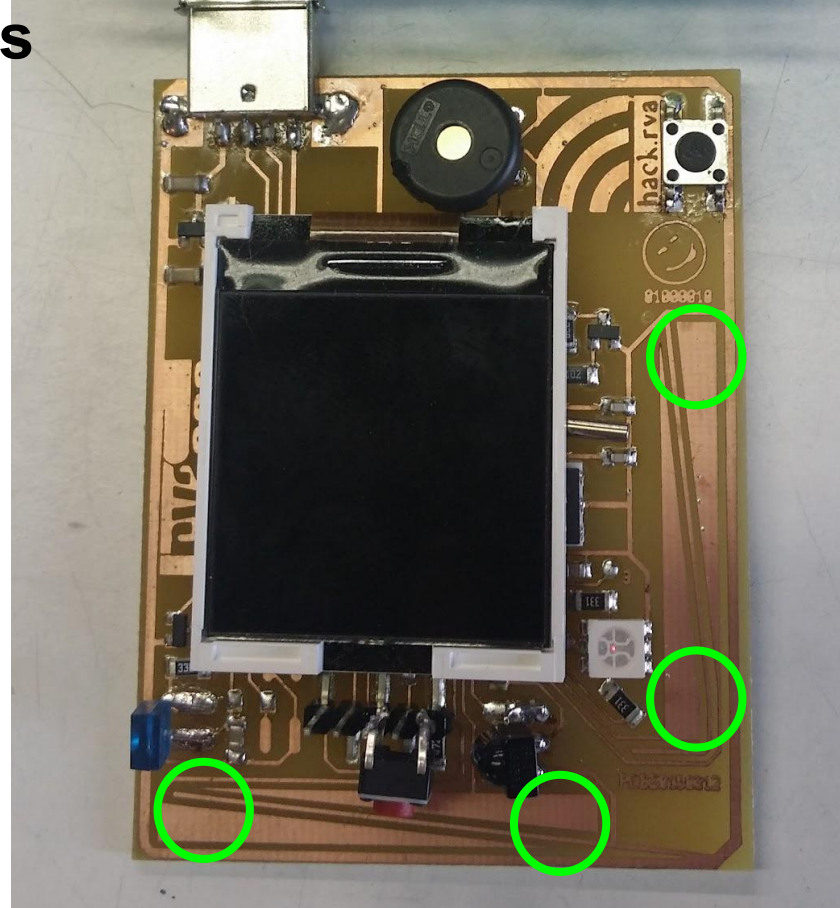

IR Receive

Capacitive Touch

Cap Touch Points

*...Only the 2048
app uses them as
sliders*

Important Things

1. Remove LCD Film
2. Do **NOT** remove touch slider tape
3. LCD may dangle loose - just use the glue blob to stick back
 - a. Come by our booth
4. Be gentle
5. Secrets exist in software
 - a. Some functionality hidden
 - b. 'Ghost' is part of CTF

Top ten reasons this badge rules

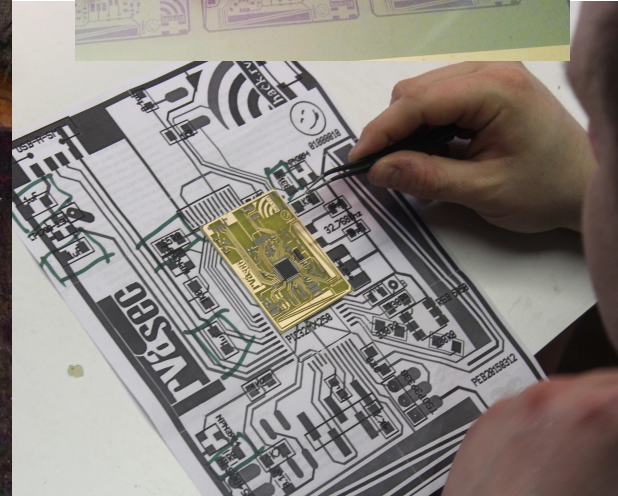

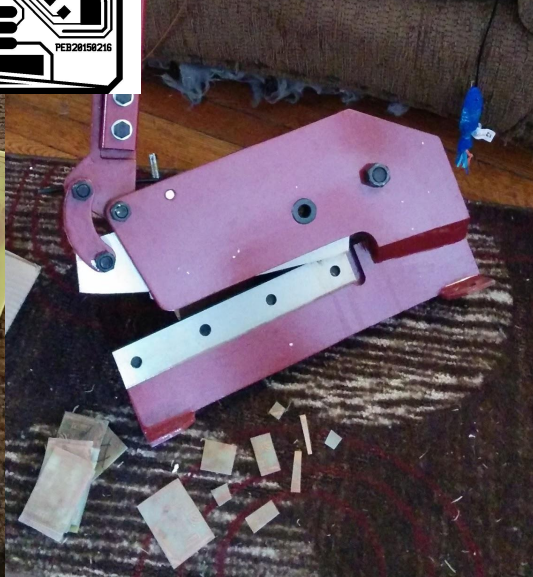

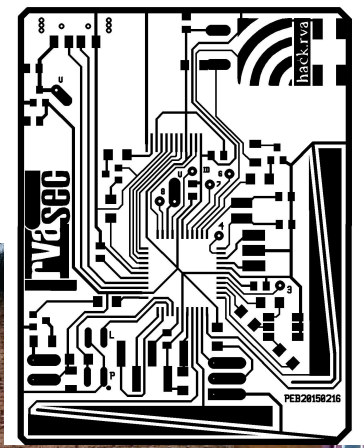

1. Real Button!
2. better board etching
3. color LCD!
4. Hardware based cap touch sensor
5. Large usb connector
6. hardware clock+calendar
7. single battery design
8. rotatable design
9. IR can face forward or out
10. Cool laser cut indicators!

How this happens...

Badge Theorem

$$\text{Space} * (\text{Time} + \text{Volunteers}) / (\text{part count}) = \text{Badges}$$

The process...

Thanks to the Volunteers
