

TROUBLESHOOTING

Where information meets WTF

whoami

- Citizen of the cosmos
- Embodied in human form
- Dad, Partner, Yoga Teacher w/over 10,000 hours of teaching
- Offensive Security at RedHelm

**WHY DOES THIS
MATTER?**

Technical Troubleshooting	Life Troubleshooting
Network connectivity fails	Relationships strain
Tools stop working	Habits break down
System performance degrades	Health/energy declines
New vulnerability emerges	Career pivot needed

- The same skills apply everywhere
- The common denominator in all life experiences is you

Philosophical Notes: Discernment

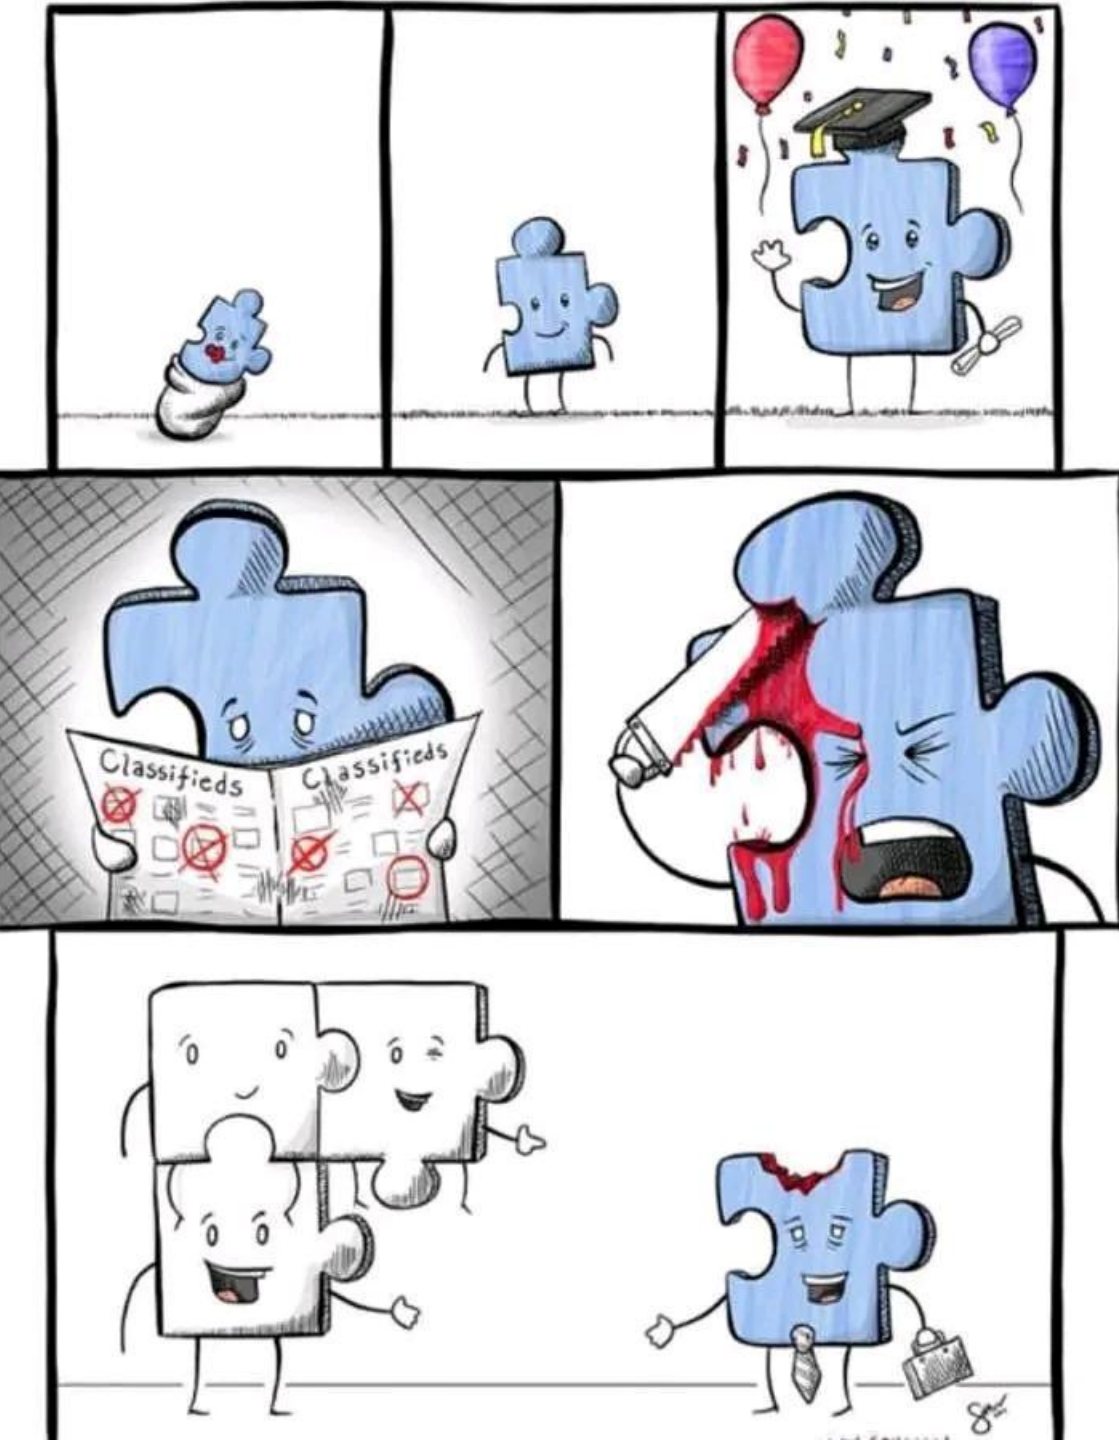

In a culture that focuses so heavily on productivity, finding ways to embody the ideal of Buddhist teaching "right effort" and the yogic terms Abhyasa and Vairagya are both countercultural and revolutionary.

Right effort reminds us that there is a balance between ceaseless striving and laziness. When our efforts are put towards reducing suffering (ours or other people's), we find the balance.

<https://www.ourbuddhismworld.com/archives/1465>

Abhyasa – consistent practice over a long period of time which eventually becomes a “default setting”

Vairagya – dispassion or not being attached to the outcomes

SIX STEPS OF TROUBLESHOOTING

Observation

Inspect Resistance

Iterate

Step Away

Repeat

Profit

What is your aim?

In a culture that is highly focused on "goals" and achievements, finding intrinsic motivation, rather than external objectives is a skill all in itself.

- Motivation? - What is your why?
- Intention? - Everything harmonized to execute a task.
- Impact in the context of relationships? – Results like ripples in a pond.

I AM NEW TO GITHUB AND I HAVE ALOT TO SAY

danemadsen · 11d

I DONT GIVE A FUCK ABOUT THE FUCKING CODE! i just want to download this stupid fucking application and use it.

<https://github.com/torvalds/linux>

WHY IS THERE CODE??? MAKE A FUCKING .EXE FILE AND GIVE IT TO ME. these dumbfucks think that everyone is a developer and understands code. well i am not and i don't understand it. I only know to download and install applications. SO WHY THE FUCK IS THERE CODE? make an EXE file and give it to me. STUPID FUCKING SMELLY NERDS

Inspect Resistance

Frustration, disappointment, and grief are all ordinary and relatable experiences in human life *and* are not well-modeled in dominant culture.

It is useful to consider the following questions when dealing with the strong emotions that arise at the beginning of a new process - inertia is real, and it isn't.

- Am I okay with not knowing? Am I okay with being uncomfortable?
- What do I do when I am frustrated?
- Am I willing/able to ask for help?

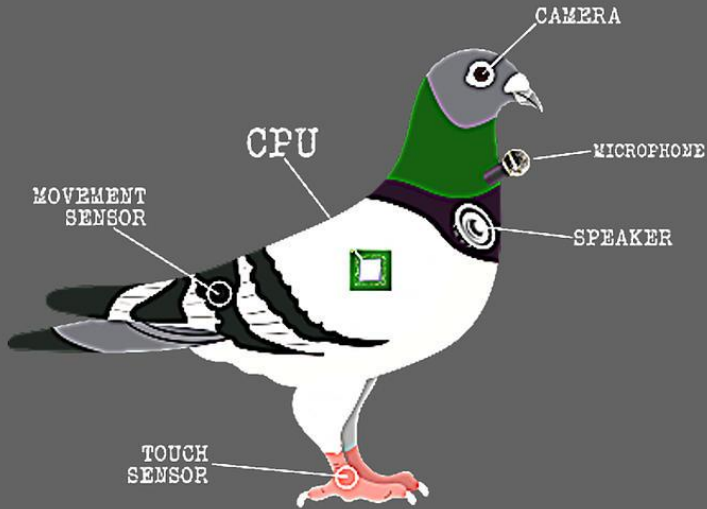

ITERATE – DO THE THING

One small change at a time is a sure-fire way to gain momentum, and "work" a problem until a solution is found. Taking things slowly, and paying attention to the process requires a willingness to "be in the step that you're in." Curiosity plays a big role in moving through this stage.

- What stage of the problem are you working on?
- Iterating forces you to truly try to understand what is happening, and how something works.
- Everything is just another moment. Maybe it's hard, and maybe it's not.
- Am I willing to find out?

BIRDS ARE

NOT REAL

Step Away

Take breaks. It depends on your specific situation, your specific personality, and your specific brain what is going to work for you. Whatever you do, here are some suggestions and some options:

- Do something you enjoy.
- Go outside. Watch a bird? Touch grass? No screens.
- Pomodoro technique:
<https://www.verywellmind.com/pomodoro-technique-history-steps-benefits-and-drawbacks-6892111>
- Time Blocking and Time Boxing
- "Eat That Frog" Technique
- Do what works for you, but get back to the task!

REPEAT

PROFIT

Yes, it's okay and necessary to celebrate when overcoming a challenge or working through something difficult. Often conflicts or challenges feel intractable until something small shifts and we find an opening that transforms uncertainty into possibility. These small gains bring us closer together in relationships and build our capacity and tolerance to endure discomfort. Once we reach the end of the troubleshooting journey we need to reflect:

- What did I learn?
- Where else can these lessons be applied?
- Who can I share this with?
- What did I realize about myself, what matters to me, and what does this tell me about my potential future?

Observe

- Seek to understand context

Inspect Resistance

- Challenge initial assumptions. "Is that real? Is that true?"

Iterate

- Remember there is a process unfolding - practice compassion.

Take Breaks

Repeat

Profit

- Take stock of lessons learned
